1 Introduction

This user manual describes the basic functionality and usage of the Onion web application. Onion is a weather-based outfit recommendation system that helps users choose suitable clothing based on current weather conditions and their personal wardrobe. Users can manage clothing items, organize them using tags, and receive outfit recommendations tailored to the current weather.

This document provides an overview of the application's features and explains how to use them.

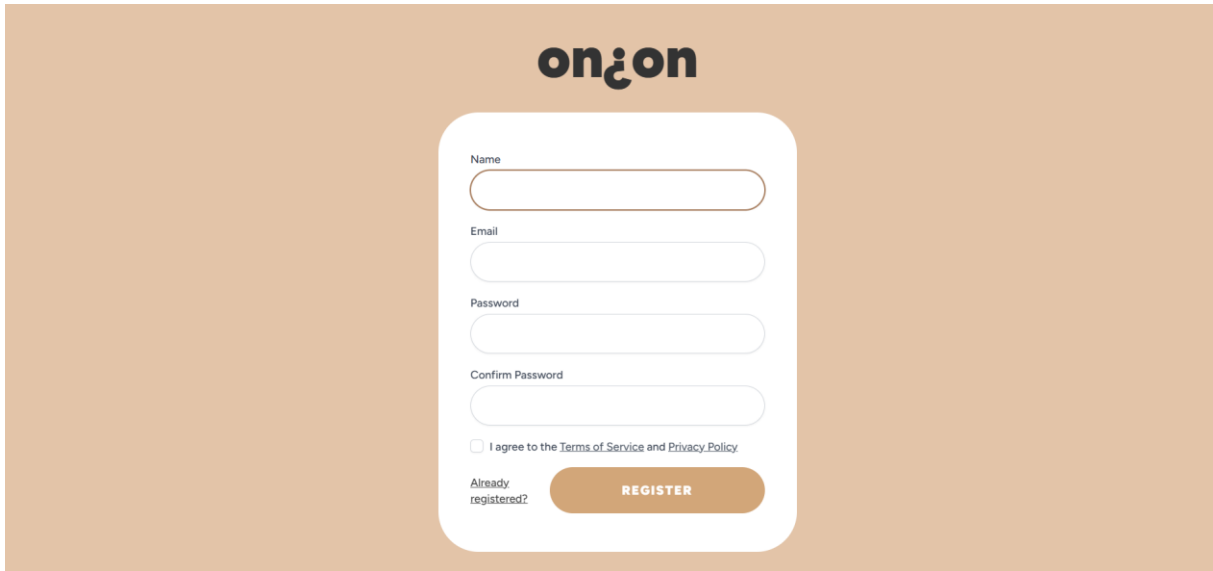

2 Access the Application

The homepage is the main entry point of the application. From here, users can register, log in, access their profile, view weather information and receive outfit recommendations. In order to access the profile page and manage their personal wardrobe, users must first register and log in.

2.1 Register

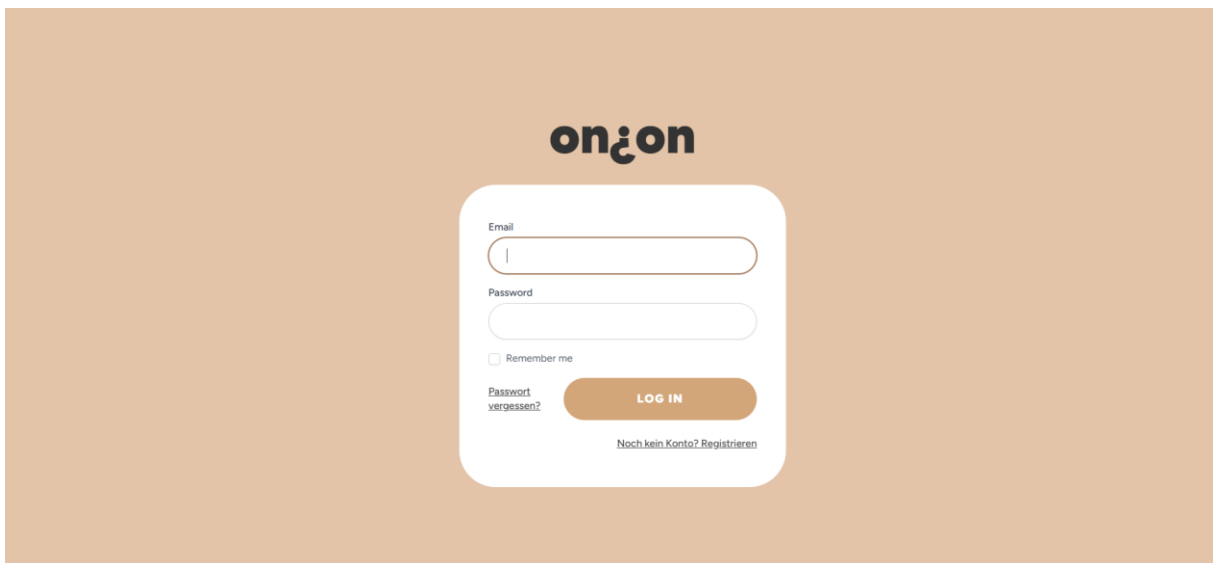

Clicking the **Register** button opens the registration page. Users must enter a username, a valid email address and a password to create an account successfully.

The registration form is centered on a light brown background. At the top is the 'on:ion' logo. The form itself is a white rounded rectangle containing the following elements: a 'Name' label above a text input field; an 'Email' label above a text input field; a 'Password' label above a text input field; a 'Confirm Password' label above a text input field; a checkbox labeled 'I agree to the Terms of Service and Privacy Policy'; a link 'Already registered?' to the left of a brown 'REGISTER' button.

2.2 Login

After registering successfully, users can log in using their email address and password.

The login form is centered on a light brown background. At the top is the 'on:ion' logo. The form is a white rounded rectangle containing: an 'Email' label above a text input field; a 'Password' label above a text input field; a checkbox labeled 'Remember me'; a link 'Passwort vergessen?' to the left of a brown 'LOG IN' button; and a link 'Noch kein Konto? Registrieren' at the bottom center.

2.3 User Credentials

The following credentials are required to register and log in to the application:

Register:

- Username
- Valid email address
- Password (minimum 8 characters)

Login:

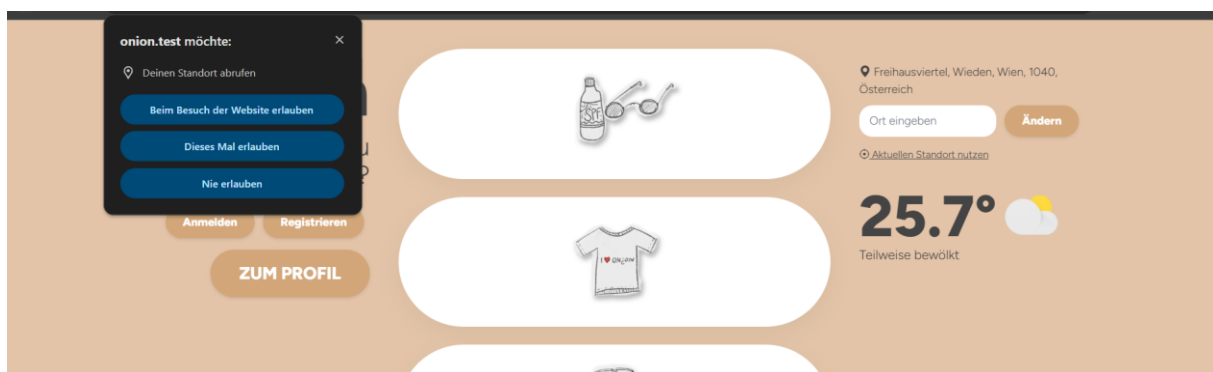

- Email address
- Password

3 Homepage Features

The homepage provides weather information, location management and outfit recommendations based on the current weather conditions.

3.1 Location Selection

Users can enter a location manually or use their current location. The selected location is used to retrieve weather information and generate recommendations.

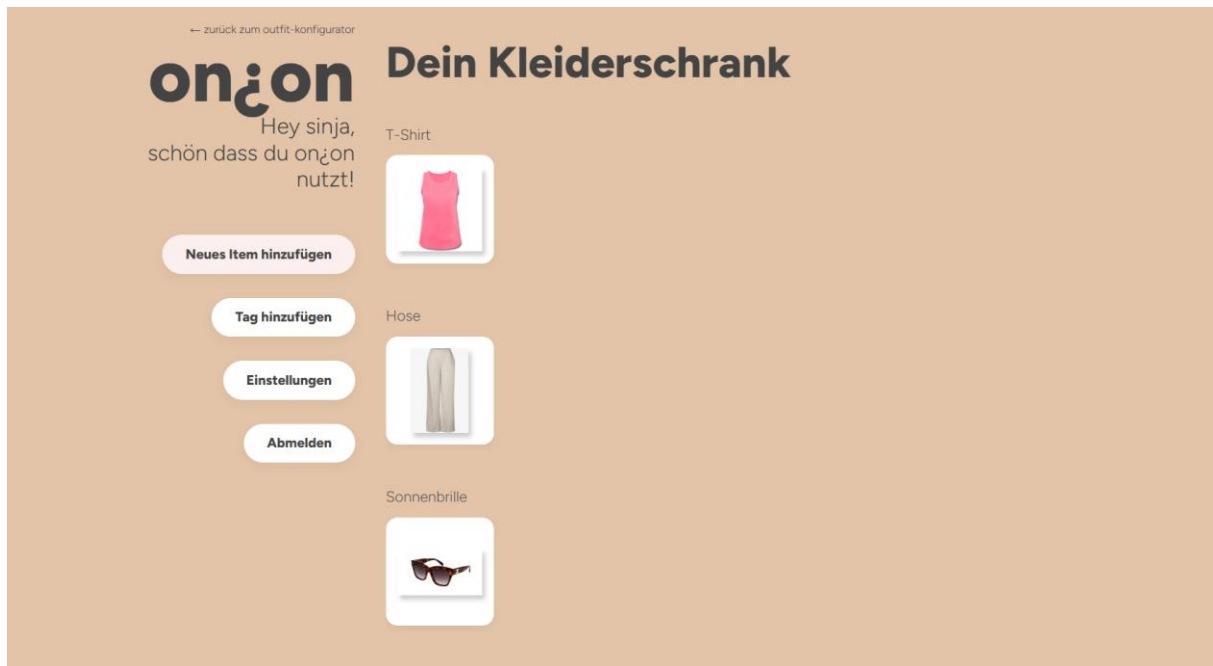

3.2 Outfit Recommendations

The outfit recommendation system combines weather data with the user's clothing items to generate suitable outfit suggestions. Recommended clothing items are displayed on the homepage and can be selected by clicking the **"Anziehen"** button.

4 Profile

As soon as users are logged in, they can access their profile. The profile contains their personal wardrobe, where clothing items are stored and organized. Users can add new clothing items, manage tags, access their settings and log out of the application.

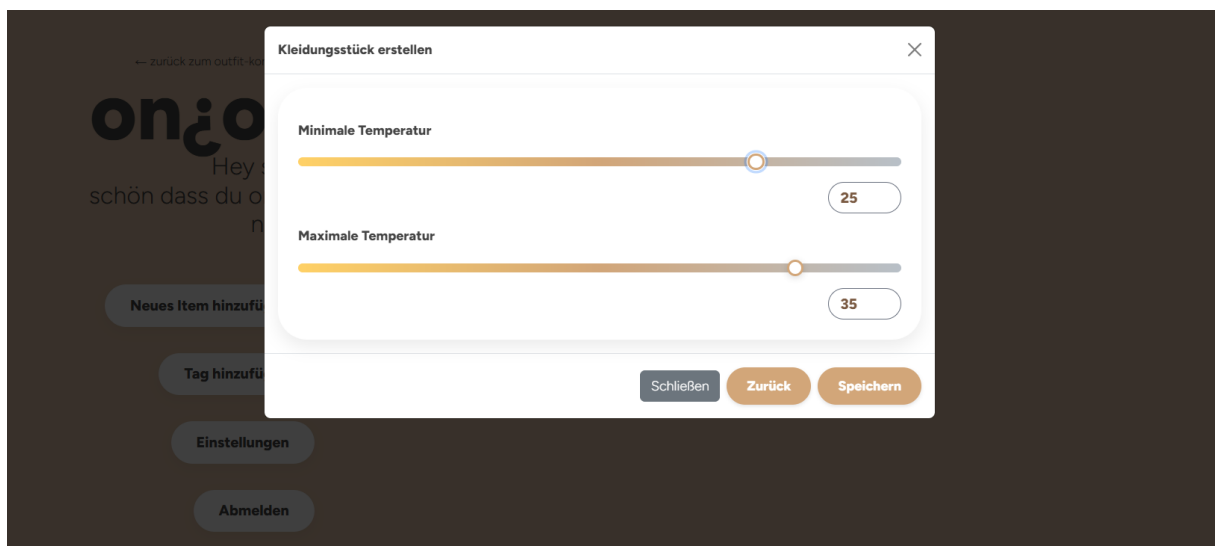

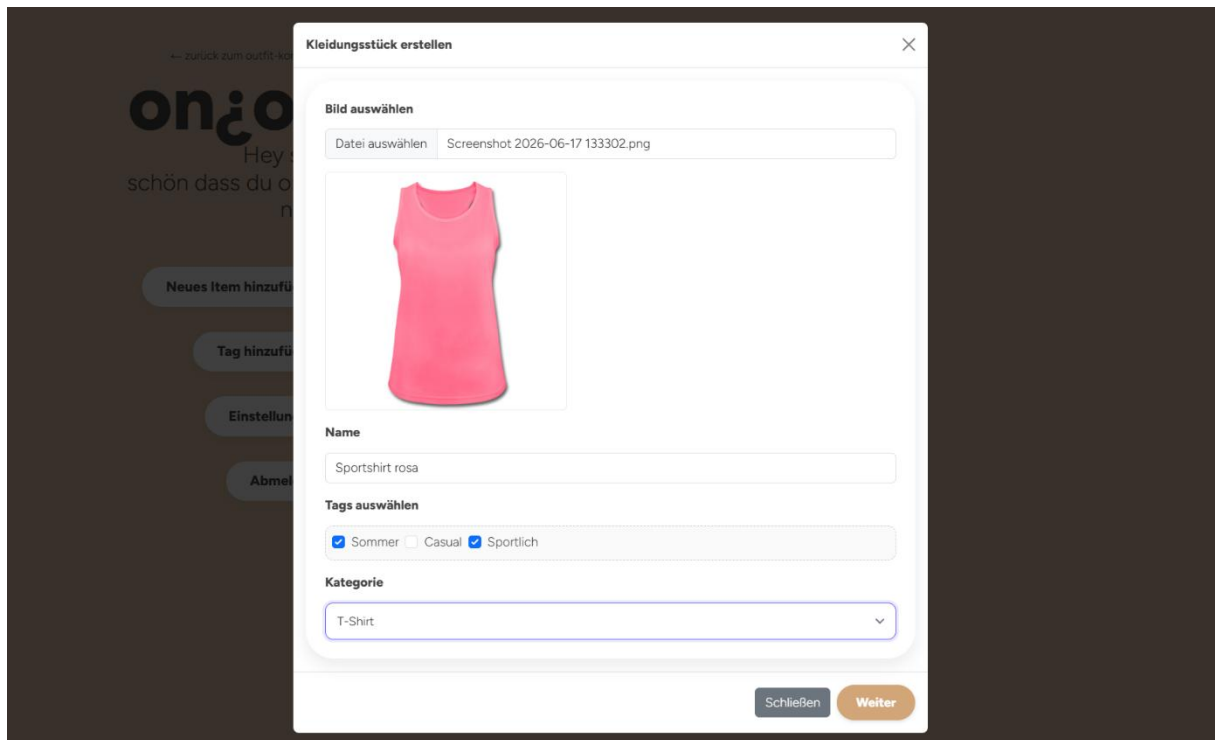

4.1 Managing Clothing Items

By clicking the **"Neues Item hinzufügen"** button, users can create a new clothing item. First, they must upload an image, enter a name, optionally select one or more tags and choose a suitable category from the dropdown menu.

The following categories are available:

Kopfbedeckung, T-Shirt, Pullover, Jacke, Hose, Strumpfhose, Socken, Schuhe, Accessoires, Sonnenbrille and Sonnencreme.

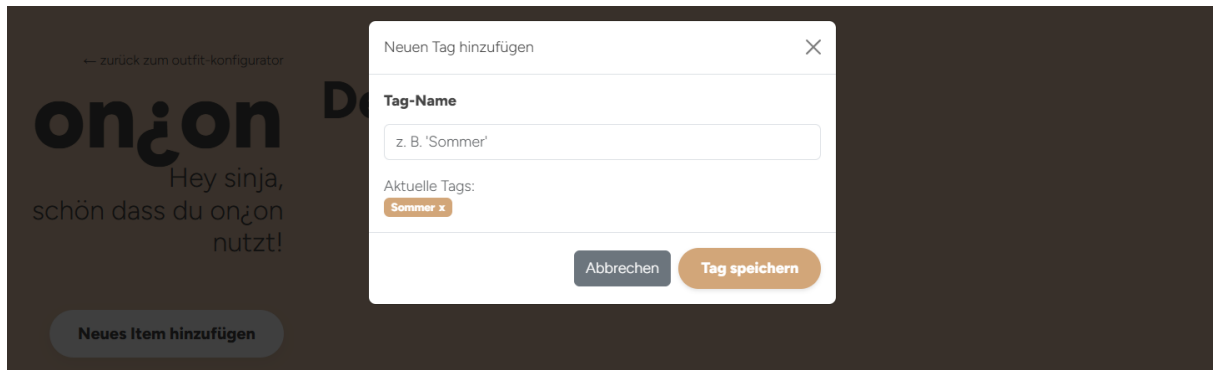

After clicking **"Weiter"**, users can configure additional properties of the clothing item. Depending on the selected category, different settings may be available. These settings are used by the recommendation system to determine whether an item is suitable for the current weather conditions.

By clicking on an existing clothing item in the wardrobe, users can open the edit view, update the item's properties and save their changes.

4.2 Managing Tags

By clicking the **"Tag hinzufügen"** button, users can create new tags and save them by clicking **"Tag speichern"**. These tags can later be assigned to clothing items for better organization. Existing tags can be edited by double-clicking on the tag name. To delete a tag, users can simply click the **"x"** button next to it.

5 Outfit Review

The outfit review page allows users to evaluate the recommended outfit. Users can indicate whether the recommendation was suitable, too warm or too cold. This feedback is used to improve and personalize future outfit recommendations.

6 Settings

The settings page allows users to update their profile information, including their name, email address and temperature offset. The temperature offset can be adjusted to reflect the user's personal temperature preferences and is considered when generating outfit recommendations. Users can also change their password in the password settings section.
